Full Stack Developer with mentor support 1:1

11/2022 - 08/2023

During the course, I collaborated on a web project within a team, using tools such as Jira and GitHub. We focused on practical implementation of project management techniques and effective team communication.

The culmination of the course was the development of a full-stack e-commerce application using React (with Redux) for the front-end and Nest.js with MySQL for the back-end. This application featured product management, a shopping cart, and an order process with an interactive user interface.
